CONSENT FOR TREATMENT AND USE OF PROTECTED HEALTH INFORMATION

Chiropractors focus on dysfunctions that can result from irregularities of spinal structure or movement. Hands-on procedures are usually preferred by most chiropractors to determine structural and functional problems. Manipulation is used to promote normal bodily function thus correcting or preventing these structural deviations. Chiropractic "adjustment" refers to a variety of manual mechanical interventions. Chiropractic adjustments and other procedures are usually beneficial and seldom cause any harm to the patient. In most cases, there is gradual but satisfactory result from chiropractic treatment. Occasionally, the results are less than expected. In rare cases, however, unknown underlying defects, deformities, or pathologies may result in injury to the patient. I understand that results of chiropractic only treatment vary and I have disclosed all known latent pathological defects, illnesses, and deformities to my chiropractor.
